 ©storymassage.co.uk	<p>Can you remember the eight different planets high up in space? Well, here's a clever rhyme to help you put them in place.</p>
 ©storymassage.co.uk	<p>My Very Excellent Mother Just Served Us Noodles.</p>
 ©storymassage.co.uk	<p>Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.</p>
 ©storymassage.co.uk	<p>Yes, eight planets in order, plus stars and oodles and oodles!</p>
 ©storymassage.co.uk	<p>Mercury. Mercury is the baby planet, smallest and nearest to the sun Named after the Roman messenger of Gods, it is the fastest one.</p>
 ©storymassage.co.uk	<p>Venus. When ancient astronomers could see only five, Venus was the prettiest planet, bright and alive.</p>
 ©storymassage.co.uk	<p>Earth. Although as humans we like to roam Earth is our sanctuary, our place, our home.</p>
 ©storymassage.co.uk	<p>Mars. Mars is like my house, it is really dusty And the colour of Mars is pretty rusty.</p>
 ©storymassage.co.uk	<p>Jupiter. Jupiter, is the largest planet, named after a powerful guy The Roman God of thunder and sky.</p>

 <p>©storymessage.co.uk</p>	<p>Saturn. Saturn is the planet famous for rings going around it, And has more moons than any other planet.</p>
 <p>©storymessage.co.uk</p>	<p>Uranus. Sometimes you can see Uranus in the sky Without a telescope, with just the human eye.</p>
 <p>©storymessage.co.uk</p>	<p>Neptune is the furthest planet away To get there I'd guess 12 years and a day It is the coldest planet and looks blue like the sea Hence the name Neptune, the Roman God of the sea.</p>
 <p>©storymessage.co.uk</p>	<p>Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune.</p>
