	It's an exciting day.
	The astronauts put on their space suits.
	They climb into the spaceship.
	And 5, 4, 3, 2, 1 ... Blast off!
	Whoosh! They fly high up into the sky. Higher and higher through the clouds.
	Into the darkness of space.
	They see sparkling, twinkling stars.
	And in the distance, they see the sun.
	But what are the other planets around the sun?
	Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune. And tiny, tiny Pluto far away.
	Amazing sights making dreams comes true for the astronauts.
